Data Pre-processing steps

1-Remove duplicates (No duplicates found)

2-Handling missing values

Age, Years of Experience, Rating and Client satisfaction column I used to impute MEDIAN value. Blank cell Imputation using excel Find & Replace tool (Ctrl+H) to fill the blank with MEDIAN value.

AGE (Median) = 41 Years of Experience (Median) =9

Rating (Median) =2.6 Client Satisfaction (Median) =82%

3-Standardizing format

Gender& Is Active column here I am use "IF" & "OR" Function to fix the problem

Hourly rate column I am use "IF ERROR","NUMBERVALU" AND "SUBSTITUTE" Function to fix the problem

Equations are,

Gender column - =IF (OR (C2="f",C2="female",C2="FEMALE"),"Female","Male")

IS Active column - =IF (OR (M2="Yes",M2="True",M2="Y",M2=1),"Active","Inactive

Hourly rate column-=IFERROR (NUMBERVALUE (SUBSTITUTE (SUBSTITUTE(J2,"\$",""),"USD",""),0)

TITEL	COUNT	COUNT BLANK
Age	970	30
Years of Experience	949	51
Hourly rate	465	94
Rating	899	101
IS Active	372	89
Client Satisfaction	824	176

Use sorting to Client satisfaction column Descending order

DATA VISUALIZATION USING POWER BI

Global Freelancers” Growth by Experience “Based Dashboard

INTRODUCTION

This report focuses on freelancers’ growth by experience, analyzing how hourly rates, satisfaction ratios, and skill-based earnings evolve over time. By examining data from China, the study highlights how different talent tiers (Budget, Mid-tier, Premium) and primary skills (Cybersecurity, Blockchain, Machine Learning, UI/UX Design, etc.) contribute to growth trajectories. The goal is to understand the link between experience and freelancer success, and to identify strategies that can help freelancers and organizations thrive in the evolving digital economy.

(a)Steps used in power Bi,

After completing the Excel preparation, the cleaned dataset was imported into Power BI and opened in the Power Query Editor for further transformation. Within Power Query, the data column change Hourly rate into Currency form. I am created a primary skill based hierarchy And 4 calculated columns and 3 measures such as,

(1)-Hourly rate segment- `IF('global_freelancers_raw (1)'[HOURLY RATE]<=25,"BUDGET",IF('global_freelancers_raw (1)'[HOURLY RATE]<=75,"MID-TIER","PREMIUM"))`

(2)-Satisfaction Category- IF ('global_freelancers_raw (1)'[CLIENT SATISFACTION]>=4.5,"EXCELLENT",IF ('global_freelancers_raw (1)'[CLIENT SATISFACTION]>=3.5,"GOOD","AVERAGE"))

(3)-Talent Tier - IF ('global_freelancers_raw (1)'[YEARS OF EXPERIENCE]=0,"FRESHER",IF('global_freelancers_raw (1)'[YEARS OF EXPERIENCE]<=3,"JUNIOR","SENIOR"))

(4)-Satisfaction - IF ('global_freelancers_raw (1)'[CLIENT SATISFACTION]>1,'global_freelancers_raw (1)'[CLIENT SATISFACTION]/100,'global_freelancers_raw (1)'[CLIENT SATISFACTION])

MEASURES

(1)- Avg.HOURLY RATE = AVERAGE (global_freelancers_raw (1)'[HOURLY RATE])

(2)- Satisfaction Ratio = AVERAGE (global_freelancers_raw (1)'[satisfaction])

(3)- TOTAL FREELANCERS = COUNT (' global_freelancers_raw (1)'[FREELANCER ID])

Findings and Analysis

1-Line chart (Avg .Hourly rate trend by Years of experience)

The line chart shows trend of increasing rate with years of experience.

2-KPI card shows a clear snapshot of whether freelancers were meeting or exceeding expectations.

3-Average hourly rate and Satisfaction ratio cards shows quick insights into Freelancers performance.

4-Pie chart (Freelancers operational status)

Pie chart shows balance between technical and creative skills and useful for identifying dominant skill categories.

5- Map (Global distribution of freelancers)

Focus on understanding regional contributions to global Freelancers growth.

6-Column Chart (Talent tier hierarchy and skill analytic)

Breaks down gender distribution across primary skills, Reveals diversity in skill specialization and identify which skills are more male or female dominated.

7-Bar chart (Financial Market Rate across Primary Skills)

Highlights market demand and pay gaps across skills, shows which skills are most valuable financially [Cybersecurity – 80] Highest ,[Mobile app-23]Lowest

(8)-Table (Workforce Breakdown by Gender &Talent Tier)

Female freelancers dominate Premium tier (\$800) Male freelancers dominate Mid-tier (\$810), Total workforce\$2,560 across tiers. It provides insight into gender and tier based distribution of earnings.

CONCLUSION

Key insight

- (1) Experienced freelancers earn higher hourly rates , in the basis of skill maturity and income
- (2) Satisfaction categories highlight that most freelancers fall into good improvement in client relations.
- (3) The dataset clearly shows the growth opportunities for junior freelancers to transition into senior tiers.

The analysis shows that Freelancers growth is strongly tied to experience, both in terms of earnings and satisfaction.

PREDICTION

This study shows that “Cybersecurity and Blockchain Specialists” are most Demanded jobs in future,with AI and Machine Learning continuing to grow steadily.Females dominate premium talent tiers,and Blockchain/Data Analysis freelancers are leading in operational activity.
